

Optimized Resume

SUMMARY

Analytical Mechanical Engineering graduate transitioning into Software Development. Leverages strong algorithmic thinking, mathematical background, and experience with automation logic to build efficient software systems. Proficient in Python, object-oriented programming, and version control. Eager to bring a rigorous engineering mindset to a junior developer role.

SKILLS

- Programming Languages: Python, SQL, CNC G/M Code
- Software & Tools: Git, GitHub, VS Code, AutoCAD, SolidWorks
- Core Competencies: Object-Oriented Programming (OOP), Data Structures & Algorithms, Automation Logic, System Design
- Soft Skills: Analytical Problem Solving, Cross-functional Collaboration, Agile Mindset

PROJECTS

Algorithmic System Control & Automation | Developer

- Programmed CNC machinery using logic-based G-code sequences to automate manufacturing runs, optimizing tool paths and cutting processing times.
- Applied automated design principles to model physical system simulations, decreasing manual overhead during structural testing phase.

Automatic Mechanical System Slider | Lead Designer

- Designed and simulated an automated slider mechanism using CAD modeling tools to optimize geometric efficiency.
- Built algorithmic step logic to govern physical component movements, ensuring precise operational control.

EXPERIENCE

GTTC | Engineering Intern

- Documented system performance and designed operational logic structures for tooling mechanisms.
- Collaborated with engineering teams to resolve technical constraints, translating physical constraints into systematic operational workflows.

EDUCATION

Visvesvaraya Technological University (VTU)

Bachelor of Engineering in Mechanical Engineering (Graduation: 2025) | CGPA: 6.8

CERTIFICATIONS

- Introduction to Computer Science and Programming (Self-Study / Ongoing)
- CAD Design and Kinematic Simulation Certification
